## SUMMARY

M.Sc. Computer Science student with strong foundations in Data Structures, Algorithms, and Full Stack Development. Experienced in building scalable web and AI-driven applications using cloud platforms like Google Cloud. Passionate about Software Engineering with hands-on experience in real-time projects and problem-solving.

## EDUCATION

|                                                                                |                     |
|--------------------------------------------------------------------------------|---------------------|
| <b>University of Madras, Guindy Campus</b><br>M.Sc. Computer Science   Chennai | Expected March 2027 |
| <b>Prof. Dhanapalan College</b><br>B.Sc. Computer Science – 87%                | 2022 – 2025         |

## TECHNICAL SKILLS

- Languages:** Java, Python, JavaScript
- Core CS:** Data Structures, Algorithms, OOP
- Web:** HTML, CSS, React, Node.js
- Database:** MySQL, Firebase
- Cloud:** Google Cloud, BigQuery, Vertex AI
- Tools:** Git, GitHub, REST APIs

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                  |      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b><u>AI Self-Learning Analytics Platform</u></b>                                                                                                                                                                                                                                                                                                                                                                | 2026 |
| <ul style="list-style-type: none"><li>Developed a scalable AI-powered analytics platform using Google Cloud tools.</li><li>Architected data pipelines to process large-scale datasets using BigQuery, <b>improving analysis efficiency by 30%</b>.</li><li>Integrated Vertex AI for predictive insights and optimized learning outcomes for concurrent users.</li></ul>                                          |      |
| <b><u>Smart Venue Management System</u></b>                                                                                                                                                                                                                                                                                                                                                                      | 2025 |
| <ul style="list-style-type: none"><li>Built intelligent system to optimize booking and resource allocation.</li><li><b>Improved scheduling efficiency by 25%</b> using automation and real-time updates.</li></ul>                                                                                                                                                                                               |      |
| <b><u>ProjectPilot – AI Project Management System (Python, ADK, API)</u></b>                                                                                                                                                                                                                                                                                                                                     | 2026 |
| <ul style="list-style-type: none"><li>Developed an AI-powered project management system using Python with API integration.</li><li>Implemented ADK-based AI agents to automate task tracking and workflow execution.</li><li>Built REST APIs for managing project data and enabling real-time updates.</li><li>Applied concepts from Google’s AI Agents course to enhance automation and productivity.</li></ul> |      |

## ACADEMIC EXPERIENCE

- Technical Lead:** Directed a team of 5 developers to build a real-time web application, ensuring code quality and version control via Git.
- Optimized application performance and resolved critical bugs through rigorous debugging and system analysis.
- Facilitated technical discussions and code reviews to foster a culture of innovation and productivity.

## CERTIFICATIONS

- Google – Crash Course on Python
- Google Cloud – Responsible AI
- Microsoft – Web Development

## ACHIEVEMENTS & ACTIVITIES

- Completed 224+ hands-on labs on Google Cloud Skills Boost platform.
- Attended Google Cloud Next 2026, gaining insights into AI and cloud technologies.
- Active member of Google Developer Groups (GDG) and Women Techmakers (WTM).
- Selected participant in AI-based events and virtual hackathons.
